

The Mindshare Suite individual product descriptions

Mindshare 100508MAX Speaker Module

The Mindshare 100508MAX Speaker Module is an optional accessory for the 100500MAX Audio and Accessory Interface, and is designed specifically for the requirements of communications dispatch consoles. In most applications, two of the 100508MAX Speaker Modules would be installed at each console position and used for Selected and Unselected audio channels. However, up to eight Speaker Modules are supported by each Mindshare Audio and Accessory Interface, providing for great flexibility in creating monitor groups in separate speakers. Each Mindshare 100508MAX Speaker Module is housed in a compact metal enclosure with volume control, and produces 9 watts of audio power for clear, easy to understand communications.
